

OVERWHELMED?

Weeks of Work Cut Down to Seconds with Lieberman Software's Industrial Strength Server Management Tools

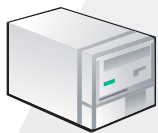

Intensive Care Utilities™

Domain migration, merge, reconfiguration, reporting, and repair in a single package.

How would you handle the worst case scenario of having thousands of your user accounts deleted by mistake? How about re-ACLing all of your shares and file ACLs after this regeneration? Do you need to move data and accounts between different Windows Server versions and other types of storage such as network attached storage? Intensive Care Utilities is a comprehensive capture and rebuilding tool that allows you to take periodic snapshots of your servers and domain controllers and turn the resulting data into human editable text files. The same text files can be used to rebuild users, groups, memberships, shares, home directories and NTFS based file system security in minutes.

Intensive Care Utilities is designed for the server administrator that needs a powerful tool coupled with excellent support to make snapshots of their server security and credentials on a regular basis. If anything goes wrong with the servers, the domain, or there is simply the need to create a duplicate domain for testing or deployment, Intensive Care Utilities does the job.

Server-to-Server Password Synchronizer™

Keep passwords in sync across domains, workstations, and multiple platforms.

When you need to keep a set of common user accounts in sync between a mixture of non-trusted domains, servers and workstations, Server-to-Server Password Synchronizer takes care of this task without the need for any client changes.

Server-to-Server Password Synchronizer manages your collection of password hashes stored in different systems, and replicates any new passwords into all other systems without any user interaction. This

LAN Server to Windows Migration Wizard™

Migrate from IBM LAN/WARP Server to Windows.

If you are still running IBM LAN Server 3.0/4.0 or IBM Warp Server and want to migrate to any of Microsoft's operating systems such as Windows NT, Windows 2000 or Server 2003, LAN Server to Windows Migration Wizard takes care of all aspects of the migration for you.

All users, passwords, groups, memberships, aliases (shares), home directories, and file system permissions (HPFS to NTFS) are handled for you. Even logon assignments in LAN Server are automatically regenerated as logon scripts in Windows. The program provides both one time and phased migration of your IBM environment to Windows. You can also pair this tool with Server-to-Server Password Synchronizer to keep your IBM and Windows environments in sync over an extended period of migration.

We have a vast pool of experience in the migration of any size company from IBM LAN Server to Windows. Give us a call and allow us to show you how to make this migration quickly and painlessly.
